19 December 1958

Dear George:

At the meeting on December 10 at Eastman Kodak Company between representatives of Kodak and Itek, discussions were held on processing recommendations and on the apparent discrepancies in assessment of resolution values. It was agreed, at this meeting, that Itek would make a careful review of the original film studies cited, which were made by the Boston University Physical Research Laboratories under a Photographic Visibility Study Program.

Since this meeting, such a review of the original film tests has been accomplished, using both microscopic and photomicrographic examination. The results of this examination confirm that either a scale or reading error appeared in these B.U. tests and that a correct interpretation of these original results yield resolution values in substantial agreement with the present Kodak values and in complete agreement with the stated Kodak position.

Very truly yours,

STATINTL
